clines to permit any light remarks to be made concerning all-four walks by assumed until the body becomes quires to be practised cautiously and without due professional challenge.

The attitudes should be gradual. Because it is whonly underent to be made concerning all-four walks by assumed until the body becomes quires to be practised cautiously and accustomed to the change. There is progressively. But it is fundamentally accustomed to the change. When the first devotees of the no doubt that this return to the post-tally good, not only in its effect on a century, the flower appearing at fashion began boasting of their bene-tion natural to early man is bene-the organs but in its correction of the end of each fifty years.

must be taken not to overdo them, in special labor or special play, like because, at first, the head is unactennis. Moving on all fours is encustomed to this rush of blood and tirely different from any ordinary the body to the novel positions as habit of the body. To that extent it at once becomes an advantage.

"The attitudes should be gradual-Because it is wholly different it results as when the body heaves a course to be excepted courselved to the millionth part of an inch.

A Doctor's View of Crawling

"The blood is sent to the head and is carried more freely to the upper part of the body. New muscles are brought into play that often are but little exercised and the position has a great effect on the intestines. They are pushed upward, and this tends to correct sagging and relieve a downward pressure, when this has occasioned trouble

"The exercise throws forward organs that have sagged from a long upright position and relieves the constant downward pressure."-Dr. Bertha J. Anthony.
